

NDNViber: Vibration-Assisted Automated Bootstrapping of IoT Devices

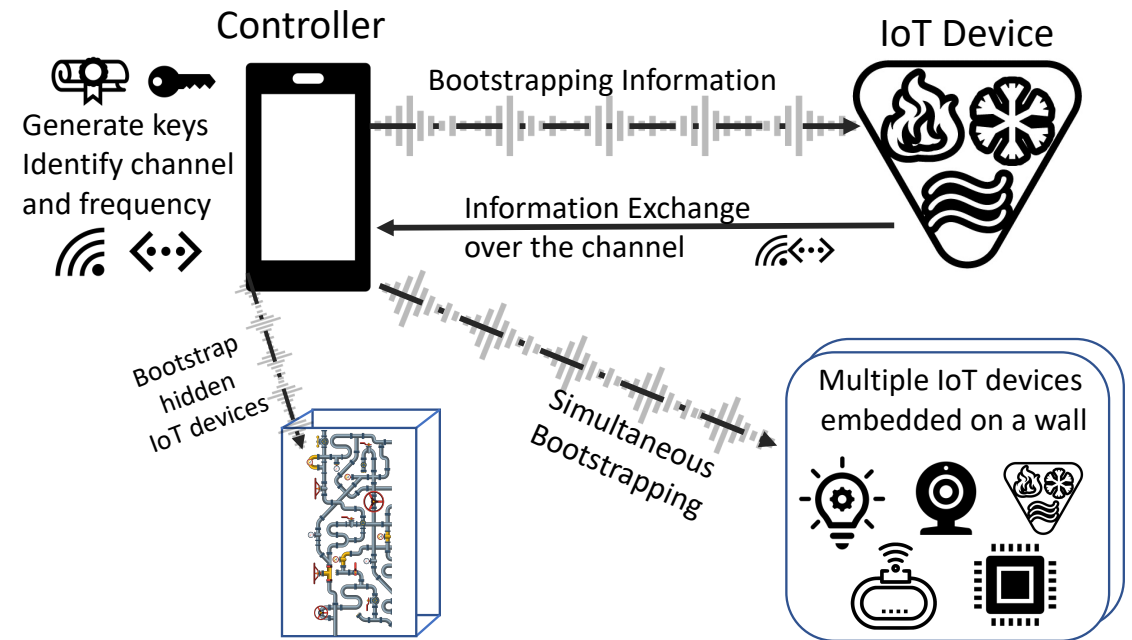

Alexander Afanasyev (Florida International University),
Sanjeev Kaushik Ramani (Florida International University)

NDNCOMM 2020

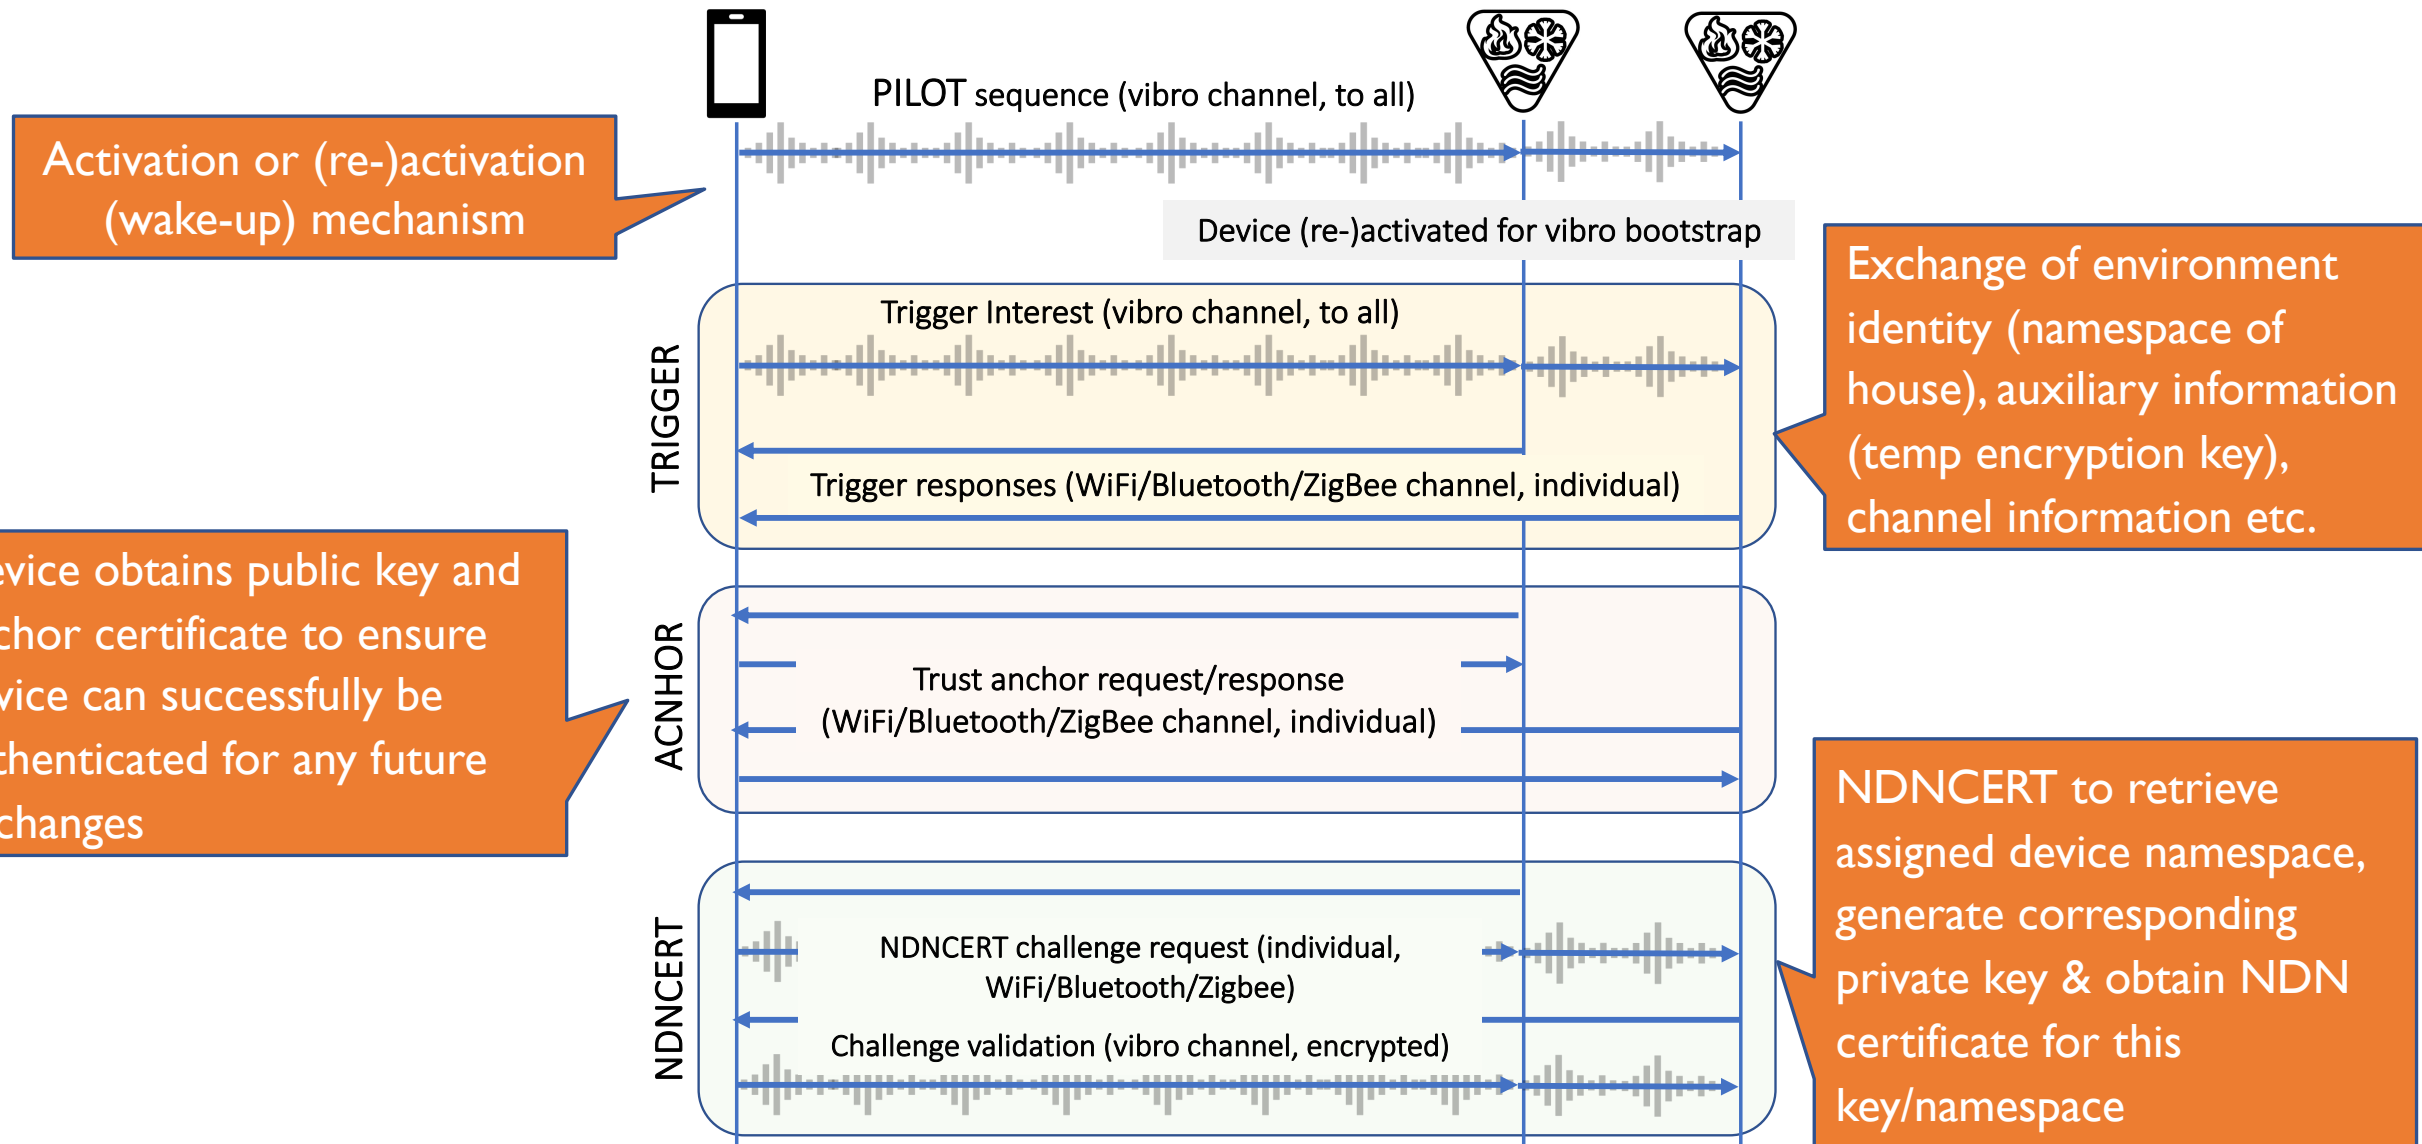

Virtual Meeting
Sept 10, 2020

NDNViber Motivation

- Proximity-based trust
 - Reduced attack surface
 - OOB trust factor
- Ability to bootstrap devices deployed in inaccessible locations
- Multi-device pairing at the same time
- Use of commodity smartphones as controllers
- Inexpensive to embed in IoT devices

NDNViber Overview (contd.)

- Specialized encoding scheme for NDNViber operation
- Advantages of vibration-assisted bootstrapping
- Security Properties
- Evaluation and Challenges faced
