

NDN BEYOND NDN: DATA DRIVEN APPLICATIONS AND SERVICES

A CONVERSATION

NDN COMMUNITY MEETING

FRIDAY OCTOBER 29TH – 11AM-12PM EDT

- 
- **Moderator:** Marie-Jose Montpetit, Associate Professor at Concordia University and IRTF Chair of the Computing in the Network Research Group
 - **Panelists:**
 - Ike Kunze, (RWTH Aachen University)
 - Rute Sofia (Fortiss)
 - Srikathyayani Srikanteswara (INTEL)
 - Dirk Trossen (Huawei Technologies)

DATA AS RESEARCH “FUEL”

- Data-driven systems are becoming predominant in networking (and elsewhere)
- Conclusions of the 2020 “NSF Future of Broadband Research”
(<https://www.cs.columbia.edu/~hgs/papers/2021/NSF-BBRR.pdf>)

Data fuels the research in technology, economy and social sciences

PANEL QUESTIONS

- What is the role of data in your work/research? Would you describe your work as “data driven”?
- Especially in IoT (and other distributed systems) storing, finding and processing that data is a challenge. How are you addressing this: NDN or non-NDN approaches.
- What would be the features for a more data-centric approach to distributed systems? How should NDN be part of that solution: should it evolve or does it have all the needed capability and just needs more visibility?
